

Promet EExd

Process Moisture Analyzer

The complete moisture measurement package for critical process gas applications.

Highlights

- EExd flameproof certified – IECEx, ATEX, UKCA, cQPSus and TR CU Ex
- Complete hazardous area installation
- Single or dual-channel measurements
- Moisture content, dew point and pressure
- Calibration traceable to NPL (UK) and NIST (US)
- Range -120...+30 °C dew point (-184...+86 °F), 0.001...30,000 ppm_v
- Remote global access options
- Sour gas compatible
- Field calibration maintenance

Applications

- Natural gas glycol dehydration
- Offshore export pipeline natural gas
- Transmission pipeline monitoring
- LNG production
- Hydrogen production, storage and transportation including natural gas injection
- Ethylene feed stock to polymer plant
- Speciality gas production

Promet EExd – The Moisture Analyzer for the Modern Process Environment

Promet EExd offers single and dual channel moisture measurement, with integrated electronic pressure reading, within a single field-installed flameproof housing. User interface is provided through the bright vacuum fluorescent display and touch screen switches.

Comprehensive Sampling Systems of state-of-the-art design, with best practice sample filtration, pressure reduction and flow control, and a range of options are available to fulfil user specific installation and application requirements.

Simple Flameproof Installation

Promet EExd is flameproof certified for use in IEC Zone 1 and 2/NEC Class 1 Div. 1 and 2 hazardous areas. The Main Unit (electronics and sensing) and associated sampling system may be mounted at a convenient location next to the pipeline or process, with gas sample and vent connections. A single, low power single-phase AC supply is required for both the analyzer and sampling system. No barrier units or safety earth are required, saving the user both cost and inconvenience.

Advanced Sensor Technology

Promet EExd utilizes the Michell Ceramic Metal-Oxide Moisture Sensor, offering unrivalled reliability and performance with more than 1,000 installations in natural gas and petrochemical installations world-wide.

Thick- and thin-film semiconductor technologies with metallized ceramics produce an exceedingly durable sensor, with measurement sensitivity to 10 ppb, moisture content and high-pressure capability up to 138 barg (2000 psig).

Unlike older aluminium-oxide technologies, the inherent immunity to pressure shock of the Ceramic Metal-Oxide Moisture Sensor completely avoids any risk of sensor failure at commissioning or shut-down, whilst the unique inert nature of the sensor gives unrivalled long-term resistance to chemical attack, even in extremely sour gas with percentage level H₂S concentrations.

The Ceramic Sensor responds to the partial pressure of water vapour in the gas being measured, which is directly related to the dew point temperature. Every Promet EExd sensor is calibrated against fundamental dew point measurement systems in Michell's world-class laboratory, which is internationally accredited and directly traceable to both NPL (UK) and NIST (USA) base standards. Precise process moisture measurement with a class leading best accuracy of $\pm 10\%$ of measured value is assured.

Comprehensive Measurement Units

Promet EExd offers complete flexibility for the user to select the preferred hygrometric unit, be it dew-point temperature in °C or °F, or an exhaustive list of moisture content units. Integral pressure measurement enables unit conversions from dew point to moisture content, or dew point to dew point for different pressure conditions.

The firmware of Promet EExd incorporates conversion data for ideal gases and also specific to natural gas, using either the long established IGT Research Bulletin No. 8 or the more recently published ISO 18453, to customer order preference.

Calibration Maintenance Made Easy

Maintenance of traceable calibration is essential to the lifetime performance of all analyzers. Beware claims of "automatic calibration". This is a non-traceable, internal field check and does not represent a true calibration of the analyzer.

For Promet EExd, true calibration maintenance is simple. The unique Michell Calibration Exchange Service offers fast delivery, world-wide, of newly calibrated replacement Ceramic Metal-Oxide Moisture Sensors certified traceable to NPL and NIST. As the calibration data for the Promet EExd Sensor is programmed into on-board non-volatile memory, fitment of a Calibration Exchange Sensor renews the calibration with minimal downtime.

No programming or data input is required by the user to complete the calibration process. The Calibration Exchange Service facilitates a professional, scheduled user QA programme at a lower cost than a traditional 'return to manufacturer' re-calibration service.

Calibration or exchange is recommended annually for sweet gases and six-monthly for sour gases. Field calibration, using a portable dew point generator (ASTM D5454), against a calibrated reference hygrometer or against certified moisture-in-gas cylinders is also possible. Promet EExd accommodates such needs within the operating firmware, providing user-friendly access to the calibration characterisation table to allow adjustments to be made at just one point (for example using a certified moisture in gas cylinder) or multiple points (using a field generator) across the measurement range.

Temperature Controlled for Best Accuracy

To ensure continuous optimum performance, the Promet EExd Main Unit is internally temperature controlled at the normal maximum local environmental temperature. This greatly reduces the effect of diurnal temperature variations that would otherwise introduce transitional adsorption and desorption effects in the sampling system components and result in erroneous measurements during periods of temperature change.

In addition the Promet EExd features an advanced temperature compensation algorithm that automatically maintains best possible measurement accuracy in the event of heater failure or if the prevailing climate exceeds the set temperature level.

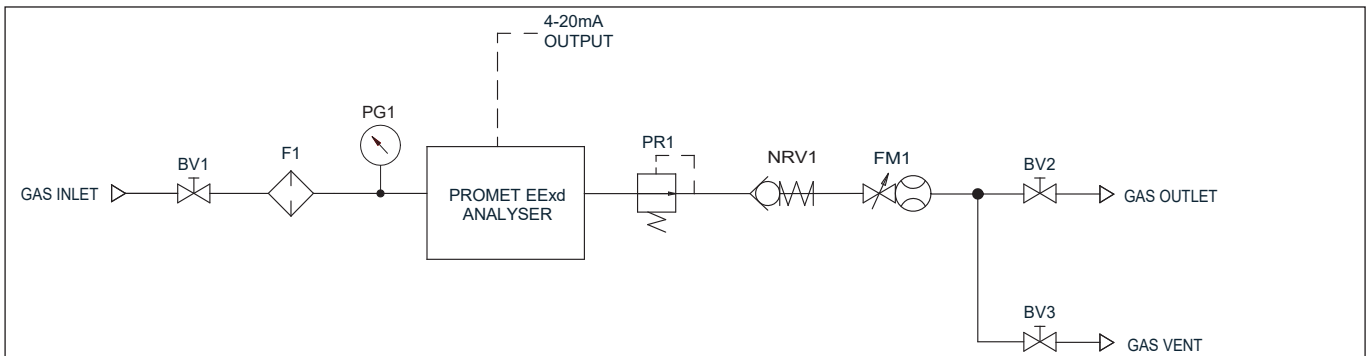

Promet EExd Premium Sampling System

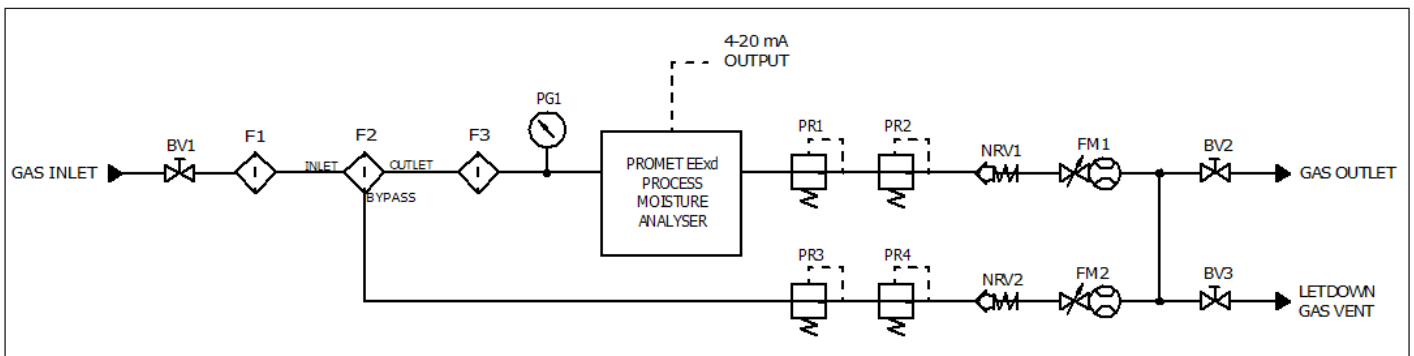

Analyzer/sampling system features

- Certified explosionproof/EExd
- Houses analyzer main unit, 1- or 2-channel measurement
- Remote global access options
- User friendly display and 'touch glass' keyboard
- Outputs: alarms and analog digital communications
- ATEX, IECEx, UKCA, cQPSus, and TR CU Ex approved
- Measurement Units:
moisture content ppm_v (ideal gas/natural gas)
lbmmscf and mg/m³ for natural gas
dew point, °C and °F
sample pressure, barg, MPa and psig
- Heating/Thermostat Options
- One or two stage sample filtration
- Optional sample cooling
- Complete hazardous area installation – indoor or outdoor
- Optional enclosure cooling
- Wide choice of standardized design options
- Non-standard customized solutions

Trace Moisture Sampling System – Single Channel

Natural Gas Sampling System – Single Channel, High Pressure

Promet EExd Main Unit Only – 'Touch Glass' HMI alphanumeric display, menu configuration by user

Communication Capability for Total Plant Integration

Promet EExd offers digital and analogue communications as standard.

- Modbus RTU is provided with optional Active X controls for integration to site SCADA/DCS.
- Two non-isolated 4...20 mA outputs per channel are user configurable for unit and range of measurement.
- Process alarm contacts can be set by the user.
- Instrument status alarms provide a continuous 'health check' through to the site control room.
- Low sample flow alarms are available as an option. Such individual alarm states are identified through the Modbus instrument registers and appear locally on the display.
- Field cable connections are conventional instrumentation pairs for all signals and alarms.

Premium Sampling Systems

Good sample conditioning and handling is particularly important in the field of moisture measurement. As the moisture sensor has to be exposed directly to the process gas stream in order to detect the water vapour present, then key sampling issues such as the avoidance of particulate and liquid contamination are imperative to successful operation. Our 30 years of expertise in on-line process gas analyzers are used to optimise the design of the Promet EExd Premium Sampling Systems.

Two core configurations, both available in either single- or dual-channel version, are available for key applications:

Natural Gas Processing and Transmission Sampling Systems

The reliable solution for glycol dehydration processes offshore and onshore and for onward pipeline transmission of sales gas. The most advanced filtration techniques with micro-porous membrane and continuous by-pass flow remove and dispose of all liquid phase contaminants. A glycol adsorption cartridge removes residual vapour that may otherwise interfere with the moisture signal.

Trace Moisture in Hydrocarbon Gas Sampling System

An optimised design for continuous trace moisture measurement in low ppm_v and ppb_v ranges for molecular sieve dehydration of natural gas prior to cryogenic liquefaction. Also suitable for many other monitoring applications at trace moisture levels in refinery gases and critical petrochemical processes. A minimalist approach to the sampling system design is essential to ensure best dynamic response to process moisture variations. A particulate filter and isolation valve are the only components prior to the sensor. As measurements are made at pipeline conditions, no regulators or other complex upstream components are necessary so ensuring the Promet EExd remains in continuous equilibrium with the process gas condition without any significant response lag.

Custom Design Service

Custom design sampling systems are available for other specific applications such as higher pressure processes and hydrogen recycle gas moisture measurement in catalytic reformer refinery processes. Your Michell office or authorised distributor will be pleased to discuss your specific application/ installation requirements.

Technical Specifications

Channel Configurations	Single and two channel
Moisture Parameters	Dew point °C and °F
Moisture Content	Automatic pressure compensated conversions: ppm _v for natural gas and ideal gas lb/mmscf and mg-m ⁻³ for natural gas Dew point at a pressure input by the user for natural gas and ideal gas. Calculations for natural gas moisture content based on either ISO 18453 or IGT#8 to customer order preference.
Analysis Pressure	barg, MPa and psig
Sensor Technology	Michell Ceramic Metal-Oxide Moisture Sensor
Measurement Range	-120°C dp...+30°C dp (-184...+86 °F) 1 ppb _v ...30,000 ppm _v 0...250 barg (0...3625 psig)
Calibration Range	-100 °C dp...+20 °C dp (-148 °F dp...+68 °F dp) 10 ppb _v ...23,000 ppm _v
Accuracy	Dew point: ±1 °C between -59.9 & +20 °C dp (±1.8 °F between -75.8 & 68 °F dp) Moisture content: ±10 % of reading Dew point: ±2 °C between -60 & -100 °C dp (±3.6 °F between -76 & -148 °F dp) Moisture content: ±20 % of reading Analysis Pressure: ±0.25 % FS.
Measured Resolution	0.1 °C (0.18 °F): -80...+20 °C dp (-112...+68 °F) 1 °C (1.8 °F): -100...-80 °C dp (-148...-112 °F)
Displayed Resolution	Dew point: 0.1 °C (0.18 °F) Moisture content: autoscale, 5 digits MPa and BarG: 0.1, psig: 1.0
Resolution	0.1 °C between +20 °C dp and -80 °C dp (0.18 °F between +68 and -112 °F dp) 1 °C between -80 °C dp and -100 °C dp (1.8 °F between -112 and -148 °F dp)
Temperature Coefficient	Algorithm compensation (-20...+50 °C)
HMI: Keyboard Interface	Capacitive touch-screen through glass
Display	Vacuum fluorescent
Datalogging	A rolling maximum of 150 data logs is available. Each log records time, date, moisture and pressure values for each channel. 5 minutes minimum and 60 minutes maximum logging intervals can be set by the user
Communications and Output	Two non-isolated 4...20 mA per measurement channel. 500 Ω maximum load. Range and parameter settable by user. Modbus RTU @ 9600 baud-rate Alarms: two volt free contacts per channel; one process value and one instrument status. Also available via Modbus communications
Main Unit Enclosure	Internal temperature control for condensation protection and stable analysis conditions
Type	Explosionproof NEC/Flameproof EExd
Construction	Cast copper-free aluminium
Finish	Chromate primer, Polyester P9010 powder coated (black). Meets BS3900
Operating Pressure	30...138 barg (435...2000 psig)
Sample Connections	1/8" NPT (F)
Sample Flow Rate	1 NI/min (Nm ³ /hr) (2.1 scfh)
Sample Flow Alarm	Optional
Power Supply	90...260 V AC, 50/60 Hz, 180 W Main Unit
Operating Environment	Indoor/Outdoor -20 °C...+60 °C (-4...+140°F) Max 95 % rh. Shaded location

Certification

Hazardous Area Certification

ATEX/UKCA: II 2G Ex db IIB + H2 Gb
T5 (Tamb -40 °C...+44 °C)
T4 (Tamb -40 °C...+60 °C)
